

**Description:**

Supplied as a two-piece insulation set, the product consists of a highly-flexible tank wraparound comprising a core of light density glass fibre blanket enclosed within a seam-welded plastic outer cover, together with a separate lid panel of similar construction but incorporating an additional lightweight plastic stiffener to prevent sagging. Installation is made simple by use of included fixing tapes to ensure a close fit of the insulation around the sides of the cold water tank. The product meets the requirements of Water Byelaw 30 and BS 7181:1989. It is highly resistant to the effects of condensation and offers no sustenance to vermin.

**Physical Data:**

Core Material:	Non-combustible lightly-bonded glass fibre blanket
Outer cover:	Plastic sheet
Health & Safety:	Non-hazardous
Nominal Density:	10kg/m <sup>3</sup>
Thermal Conductivity (K value):	0.044W/mK
Thermal Resistance (R value):	1.1
Thickness:	40mm (standard), 80mm (to order)

**Dimensions:**

Superttherm Cold Water Tank Jackets are available in the following dimensions/sizes: -

- 18" x 12" x 12"
- 48" x 24" x 24"
- 29" x 22" x 22"
- 50 Gallon
- 25 Gallon
- 4 Gallon

In addition to the above, special sizes are available to order.

*Please note that the underside of a cold water tank should not be insulated.*
